

Restaurant Operations Management System

Complete User Guide

Run your cafe or restaurant on real numbers - inventory, recipes, sales, finance, operations, team and analytics, all in one place.

Open the app

<https://romancham-nine.vercel.app>

Prepared for the Romancham team - Works on desktop, tablet and mobile

1. Welcome to Romancham

Romancham is an all-in-one system that helps a food business understand and run itself from real data. Instead of scattered notebooks and spreadsheets, everything - what you buy, what you make, what you sell, what you spend, and how your team performs - lives in one secure place and turns into clear numbers.

You can open it from any browser on a computer, tablet or phone - no installation needed:

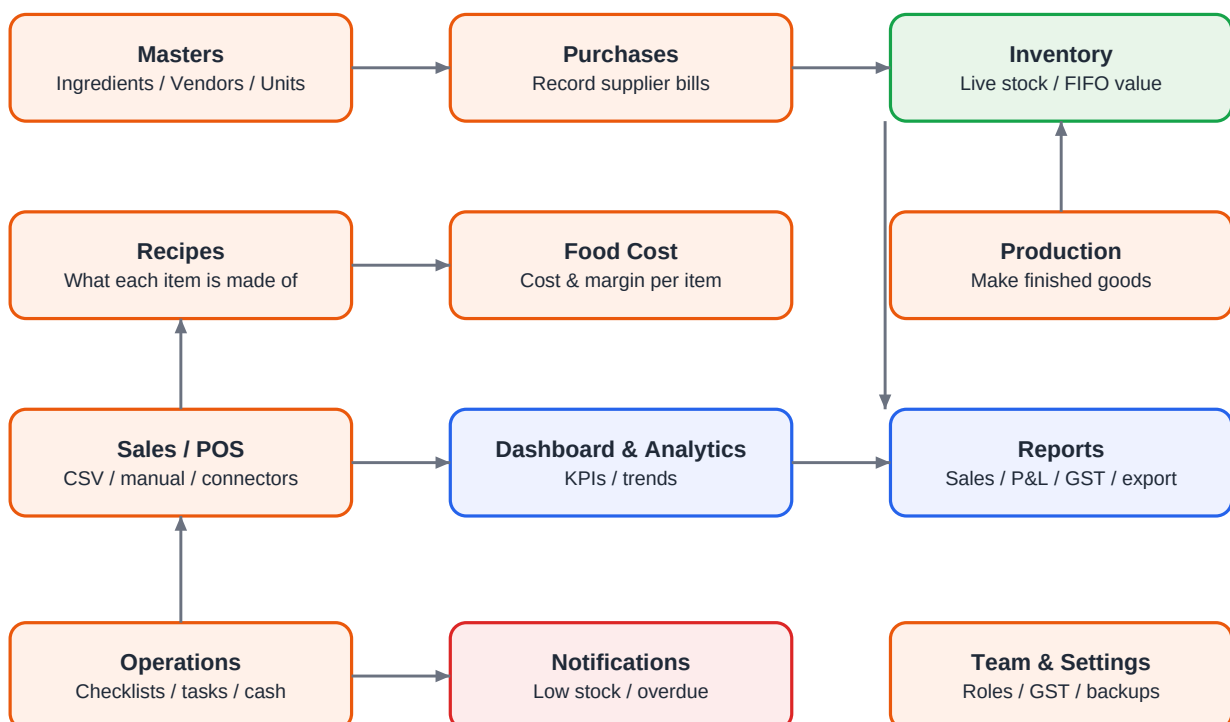

<https://romancham-nine.vercel.app>

What you get

- **Dashboard & Analytics** - sales, food cost %, profit and trends at a glance.
- **Inventory & Purchases** - live stock and supplier bills; stock is reduced by production and manual adjustments (not by sales).
- **Recipes & Food Cost** - know the exact cost and margin of every menu item.
- **Operations** - daily checklists, tasks, wastage, cash reconciliation, stock requests.
- **Finance** - monthly Profit & Loss, food/prime/labour cost, EBITDA.
- **Team** - invite staff with roles, track activity, and keep automatic backups.

2. How it all fits together

The diagram below shows how information flows through Romancham. You set up your **Masters** once, then record **Purchases** and **Sales** day-to-day. Everything else - inventory, food cost, reports, dashboards and alerts - updates automatically from those entries.

How to read it: arrows show where information travels. For example, when you import a day's **Sales**, Romancham refreshes the **Dashboard** and **Reports**. Sales do **not** change stock - you reduce inventory through **Production**

(raw-material issue) and manual **Inventory** adjustments. When stock falls below its reorder level, a **Notification** is raised.

3. Getting started

Open the app

Go to <https://romancham-nine.vercel.app> in your browser. Bookmark it for quick access.

Sign in

Enter your email and password on the [Sign in](#) page. Forgot your password? Use “Forgot password?” to get a secure reset link by email.

Pick your branch

If you have more than one location, use the branch selector at the top-right to switch between them. All data you see is for the selected branch.

Set up your business (owner)

Under Settings, add your organization name and GSTIN, add branches, and invite your team. Do this once at the start.

Finding your way around

The left sidebar (a menu button on mobile) is your main navigation. The top bar shows your business name, the branch selector, a notifications bell, and sign-out.

4. Module-by-module guide

Each section below explains what a module is for and the main things you can do. The link takes you straight to that page.

Dashboard

Your daily command centre - the health of the business at a glance for the selected date range.

- See Revenue, Purchases, Food Cost %, Gross & Net Profit.
- “Today at a glance”: today's sales vs yesterday, this week vs last, this month vs last, average bill and orders.
- “Operational metrics”: COGS, prime cost %, labour %, inventory value, stock turnover, wastage %, EBITDA, cash flow.
- Interactive charts for revenue, branch performance and category split; plus a “Needs attention” alert panel.

Open: <https://romancham-nine.vercel.app/dashboard>

Operations

The hub for running each shift - checklists, tasks, wastage, stock requests and cash.

- **Daily checklists:** opening, closing, cleaning and food-safety - tap items done, get a compliance score.
- **Tasks:** assign jobs to staff with a due time and priority; track completion %.
- **Wastage:** log spoilage by item and reason with its cost.
- **Indents & Purchase requests:** request stock from the store or a vendor; managers approve.
- **Finance:** monthly P&L and daily cash reconciliation.

Open: <https://romancham-nine.vercel.app/operations>

Ingredients (Item master)

Your master list of everything you buy and sell, with units, reorder levels and GST details.

- Add items and mark them as Purchase (bought) or Sales (sold) items.
- Set reorder and maximum levels so low-stock alerts and auto-drafts work.
- Deleted items go to a “Recently deleted” panel and can be restored anytime.

Open: <https://romancham-nine.vercel.app/masters/ingredients>

Vendors

Your suppliers, with GSTIN, contact details and default items.

- Add suppliers; GSTIN and phone are validated to prevent wrong entries.
- Mark a primary vendor per item so purchase requests suggest the right supplier.

Open: <https://romancham-nine.vercel.app/masters/vendors>

Recipes & Food Cost

Link each menu item to its ingredients so Romancham can calculate exact food cost and margin.

- Build a recipe by adding ingredients and quantities.
- See live food cost per item as ingredient prices change.

Open: <https://romancham-nine.vercel.app/recipes>

Production

Record batches you make in-house (e.g. ice cream) that consume raw materials and add finished goods.

- Log a production batch; raw materials are deducted and finished stock is added automatically.

Open: <https://romancham-nine.vercel.app/production>

Purchases

Your purchase register - every supplier bill with taxes and payment status.

- Add a bill with items, quantities, rates and GST (CGST/SGST or IGST).
- Filter by vendor, date and value; unpaid bills raise a reminder.

Open: <https://romancham-nine.vercel.app/purchases>

Sales & POS Connectors

Bring sales into Romancham - from a Petpooja CSV, manual entry, or (soon) a direct POS connection.

- Import a day's sales CSV, or add a sale manually; edit or delete entries.
- Sales feed your revenue, Dashboard and Reports - they do not change stock.
- See connector status and sync history on [POS Connectors](#).

Open: <https://romancham-nine.vercel.app/sales>

Inventory

Live stock on hand and its value (FIFO), with low/out-of-stock flags.

- View quantity, stock value, reorder level and status per item.
- Reduce stock here: make a manual adjustment (issue/consumption) whenever you count or issue stock.
- Stock is **never** reduced automatically by sales - only by Production and these adjustments.

Open: <https://romancham-nine.vercel.app/inventory>

Expenses

Record operating costs like rent, utilities, salaries and supplies by category.

- Add expenses with category and amount; these feed the P&L and labour % automatically.

Open: <https://romancham-nine.vercel.app/expenses>

Reports

Ready-made reports you can filter and export.

- Sales (daily / by item), Purchases by vendor, Expenses by category.
- Profit & Loss with EBITDA, Inventory valuation, Wastage, and Compliance.
- Filter by date range and branch; export to CSV/Excel or Print/PDF.

Open: <https://romancham-nine.vercel.app/reports>

Activity Log

A tamper-proof record of who changed what and when (owner/admin only).

- See user, time, action, table, old vs new values, IP and device.
- Search, filter and export; entries can never be edited or deleted.

Open: <https://romancham-nine.vercel.app/activity>

Settings

Manage your organization, branches, team and backups.

- **Organization:** name and GSTIN (validated), state code (drives CGST/SGST vs IGST).
- **Branches:** add and manage locations.
- **Team:** invite teammates with a role, set branch access, suspend or remove, resend/cancel invites.
- **Automatic Backups:** daily/weekly/monthly restore points; download or (owner) restore.

Open: <https://romancham-nine.vercel.app/settings/team>

5. Team roles & what they can do

When you invite someone, you choose a role. Roles decide what each person can see and change. Owners and Admins can do everything; other roles are focused on their job.

Role	Best for	Typical access
Owner	Business owner	Everything, including team, settings and restore.
Admin	Trusted manager	Manage the whole workspace, team and settings.
Branch Manager	Outlet manager	Run day-to-day operations for their branch(es).
Kitchen	Chefs / kitchen	Recipes, production and kitchen checklists.
Store	Store keeper	Inventory, indents and purchase requests.
Cashier	Front counter	Sales, cash reconciliation and daily operations.
Accounts	Accountant	Finance, expenses and reports.
Viewer	Read-only	View dashboards and reports; no edits.

6. Everyday workflows (step by step)

Opening the outlet each day

1. Sign in and confirm the correct branch is selected.
2. Open **Operations > Daily checklists** and complete the Opening and Cleaning checklists.
3. Check the **Dashboard** "Needs attention" panel and the bell for anything overdue or low.

Recording a purchase (supplier bill)

1. Go to **Purchases > New purchase**.
2. Pick the vendor, add items with quantity, rate and GST, and save.
3. Stock and inventory value update automatically; unpaid bills show a reminder.

Bringing in the day's sales

1. Go to **Sales** and import your Petpooja CSV (or add sales manually).
2. Sales update your revenue, Dashboard and Reports. Stock is **not** affected by sales.
3. Do a **cash reconciliation** in Operations > Finance at end of day.

Reducing stock (daily issue / production)

1. Make finished goods in **Production** - raw materials are consumed automatically.
2. For other reductions, open **Inventory** and record a manual adjustment (issue/consumption).
3. Inventory always reflects purchases in, production/issues out, and your adjustments - independent of sales.

Handling low stock

1. A low-stock item raises a bell notification and shows on the Dashboard.
2. In **Operations**, use "Auto-draft PRs from low stock" to create draft purchase requests, grouped by the suggested vendor with a suggested quantity.
3. A manager approves the request, then it's ordered and received.

Checking profit & food cost

1. Open the **Dashboard** for headline numbers, or **Reports > Profit & Loss** for detail.
2. Watch Food Cost % (target under 30%) and Prime Cost % (target under 60%).
3. Export any report to CSV/Excel or Print to PDF to share.

Adding a team member

1. Go to **Settings > Team** and enter the person's email and role.
2. Share the generated invite link (valid 7 days). They sign in with that email to join.
3. You can resend, cancel, suspend, change role or branch access anytime.

7. Good-to-know & support

- **It's safe to explore.** Deleting a master item only archives it - you can restore it from "Recently deleted".
- **Nothing is lost.** Automatic daily/weekly/monthly backups are kept; owners can restore a point anytime.
- **Works on mobile.** Everything is touch-friendly with large buttons for the shop floor.
- **Accurate GST.** GSTIN, PAN, HSN/SAC and state codes are validated to prevent wrong entries.

- **Keep it current.** The more consistently you record purchases and sales, the more accurate every number becomes.
